

AMENDMENTS TO THE CLAIMS:

This listing of claims replaces all prior versions, and listings, of claims in the application.

Please amend the claims as follows.

LISTING OF CLAIMS:

1. (Currently Amended) A method comprising:

receiving a first set of information, based on a ~~present~~ first and at least one second ~~past~~ geographic location of interest to a user, the first and at least one second geographic locations being different;

sending, through a network, the first set of information to assemble a geographic location profile of the user, the geographic profile including the first and the at least one second geographic locations;

receiving, through the network, a second set of information, based on the geographic location profile of the user, the second set of information including information related to both the first and the at least one second geographic locations; and

communicating the second set of information to the user, wherein the geographic location profile of the user is based on the first set of information.

2. (Original) The method of claim 1, wherein the second set of information includes information on at least one of news, business, entertainment, sports, and people.

3. (Original) The method of claim 1, wherein the second set of information is selected to be sent through the network by a comparison between the geographic location profile of the user and a geographic location determined based on the second set of information.

4. (Original) The method of claim 3, wherein the geographic location determined based on the second set of information is appended to the second set of information to correlate the second set of information with at least one geographic location.

5. (Original) The method of claim 1, further comprising receiving a third set of information, based on the second set of information; and sending, through the network, the third set of information.

6. (Original) The method of claim 5, further comprising receiving, through the network, a fourth set of information, based on the third set of information; and communicating the fourth set of information to the user.

7. (Original) The method of claim 6, wherein the second set of information communicated to the user includes a link for the user to select the fourth set of information.

8. (Original) The method of claim 6, wherein the fourth set of information includes information on at least one of news, business, entertainment, sports, and people.

9. (Currently Amended) The method of claim 1, wherein the at least one ~~past~~ second geographic location of interest to the user includes at least one of the birthplace, hometown, high school, college, residence, and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

10. (Currently Amended) The method of claim 1, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a geographic location nearby at least one of the birthplace, hometown, high school, college, residence, and

physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

11. (Currently Amended) The method of claim 1, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

12. (Currently Amended) The method of claim 1, wherein the ~~present~~ first and at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location nearby a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

13. (Original) The method of claim 1, wherein the first set of information includes information based on at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

14. (Original) The method of claim 13, wherein the present geographic location of the user is determined by at least one of a global positioning device and a telecommunication locating device.

15. (Original) The method of claim 13, wherein the user determines the present geographic location of itself.

16. (Original) The method of claim 1, wherein the first set of information includes information based on a geographic location nearby at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

17. (Currently Amended) An apparatus comprising:

a processor to receive a first set of information, based on a ~~present~~ first and at least one ~~past~~ second geographic location of interest to a user, the first and at least one second geographic locations being different;

a transmitter to send, through a network, the first set of information to assemble a geographic location profile of the user, the geographic location profile including information related to both the first and the at least one second geographic locations;

a receiver to receive, through the network, a second set of information, based on the geographic location profile of the user, the second set of information including information related to both the first and the at least one second geographic locations; and

a display device to display the second set of information to the user, wherein the transmitter, the receiver, and the display device are coupled to the processor, and wherein the geographic location profile of the user is based on the first set of information.

18. (Original) The apparatus of claim 17, wherein the second set of information includes information on at least one of news, business, entertainment, sports, and people.

19. (Original) The apparatus of claim 17, wherein the second set of information is selected to be sent through the network by a comparison between the geographic location profile of the user and a geographic location determined based on the second set of information.

20. (Original) The apparatus of claim 19, wherein the geographic location determined based on the second set of information is appended to the second set of information to correlate the second set of information with at least one geographic location.

21. (Original) The apparatus of claim 17, wherein the processor is configured to receive a third set of information, based on the second set of information, and wherein the transmitter is configured to send, through the network, the third set of information.

22. (Original) The apparatus of claim 21, wherein the receiver is configured to receive, through the network, a fourth set of information, based on the third set of information, and wherein the display device is configured to display the fourth set of information to the user.

23. (Original) The apparatus of claim 22, wherein the second set of information displayed to the user includes a link for the user to select the fourth set of information.

24. (Original) The apparatus of claim 22, wherein the fourth set of information includes information on at least one of news, business, entertainment, sports, and people.

25. (Currently Amended) The apparatus of claim 17, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes at least one of the birthplace, hometown, high school, college, residence, and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

26. (Currently Amended) The apparatus of claim 17, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a geographic location nearby at least one of the birthplace, hometown, high school, college, residence,

and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

27. (Currently Amended) The apparatus of claim 17, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

28. (Currently Amended) The apparatus of claim 17 wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location nearby a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

29. (Original) The apparatus of claim 17, wherein the first set of information includes information based on at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

30. (Original) The apparatus of claim 29, further comprising at least one of a global positioning device and a telecommunication locating device to determine the present geographic location of the user, and wherein the at least one of the global positioning device and the telecommunication locating device is coupled to the processor.

31. (Original) The apparatus of claim 29, wherein the user determines the present geographic location of itself.

32. (Original) The apparatus of claim 17, wherein the first set of information includes information based on a geographic location nearby at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

33. (Currently Amended) A machine-readable medium having encoded information, which when read and executed by a machine causes a method comprising:

receiving a first set of information, based on a ~~present~~ first and at least one ~~past~~ second geographic location of interest to a user, the first and the at least one second geographic locations being different;

sending, through a network, the first set of information to assemble a geographic location profile of the user, the geographic location profile including information related to both the first and the at least one second geographic locations;

receiving, through the network, a second set of information, based on the geographic location profile of the user, the second set of information including information related to both the first and the at least one second geographic locations; and

communicating the second set of information to the user, wherein the geographic location profile of the user is based on the first set of information.

34. (Original) The machine-readable medium of claim 33, wherein the second set of information includes information on at least one of news, business, entertainment, sports, and people.

35. (Original) The machine-readable medium of claim 33, wherein the second set of information is selected to be sent through the network by a comparison between the geographic location profile of the user and a geographic location determined based on the second set of information.

36. (Original) The machine-readable medium of claim 35, wherein the geographic location determined based on the second set of information is appended to the second set of information to correlate the second set of information with at least one geographic location.

37. (Original) The machine-readable medium of claim 33, the method further comprising receiving a third set of information, based on the second set of information; and sending, through the network, the third set of information.

38. (Original) The machine-readable medium of claim 37, the method further comprising receiving, through the network, a fourth set of information, based on the third set of information; and communicating the fourth set of information to the user.

39. (Original) The machine-readable medium of claim 38, wherein the second set of information communicated to the user includes a link for the user to select the fourth set of information.

40. (Original) The machine-readable medium of claim 38, wherein the fourth set of information includes information on at least one of news, business, entertainment, sports, and people.

41. (Currently Amended) The machine-readable medium of claim 33, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes at least one of the birthplace, hometown, high school, college, residence, and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

42. (Currently Amended) The machine-readable medium of claim 33, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a geographic location nearby at least one of the birthplace, hometown, high school, college, residence, and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

43. (Currently Amended) The machine-readable medium of claim 33, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

44. (Currently Amended) The machine-readable medium of claim 33, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location nearby a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

45. (Original) The machine-readable medium of claim 33, wherein the first set of information includes information based on at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

46. (Original) The machine-readable medium of claim 45, wherein the present geographic location of the user is determined by at least one of a global positioning device and a telecommunication locating device.

47. (Original) The machine-readable medium of claim 45, wherein the user determines the present geographic location of itself.

48. (Original) The machine-readable medium of claim 33, wherein the first set of information includes information based on a geographic location nearby at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

49. (Currently Amended) A system comprising: a first machine, coupled to a display device;

a second machine, coupled to a machine-readable medium; and a network, coupled to the first machine and the second machine, wherein the second machine

(i) receives, through the network, a first set of information, based on a ~~present first~~ and at least one ~~past second~~ geographic location of interest to a user, the present and at least one past geographic locations being different;

(ii) assembles a geographic location profile of the user based on the first set of information, the geographic location profile including the first and the at least one second geographic locations;

(iii) selects a second set of information based on the geographic location profile of the user, the second set of information including information related to both the first and the at least one second geographic locations; and

(iv) sends, through the network, the second set of information to the first machine, wherein the first machine receives, through the network, the second set of information from the second machine to display, through the display device, the second set of information to the user, and wherein the machine-readable medium stores the geographic location profile of the user and the second set of information.

50. (Original) The system of claim 49, wherein the second set of information includes information on at least one of news, business, entertainment, sports, and people.

51. (Original) The system of claim 49, wherein the second machine is configured to: determine a geographic location based on the second set of information, append the geographic location to the second set of information, and compare (i) the geographic location profile of the user and (ii) the geographic location appended to the second set of information to select the second set of information.

52. (Original) The system of claim 51, wherein the geographic location appended to the second set of information is used to correlate the second set of information with at least one geographic location.

53. (Original) The system of claim 49, wherein the second machine is configured to receive, through the network, a third set of information from the first machine, and wherein the third set of information is based on the second set of information sent to the first machine.

54. (Original) The system of claim 53, wherein the machine-readable medium is configured to store a fourth set of information, and wherein the second machine, coupled to the machine-readable medium, is configured to (i) select the fourth set of information based on the third set of information, and (ii) to send, through the network, the fourth set of information to the first machine.

55. (Original) The system of claim 54, wherein the second set of information sent to the first machine includes a link for the user to select the fourth set of information.

56. (Original) The system of claim 54, wherein the fourth set of information includes information on at least one of news, business, entertainment, sports, and people.

57. (Currently Amended) The system of claim 49, wherein the ~~present~~ first and at least one ~~past~~ second geographic location of interest to the user includes at least one of the birthplace, hometown, high school, college, residence, and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

58. (Currently Amended) The system of claim 49, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a geographic location nearby at least one of the birthplace, hometown, high school, college, residence, and physical geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

59. (Currently Amended) The system of claim 49, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

60. (Currently Amended) The system of claim 49, wherein the ~~present~~ first and the at least one ~~past~~ second geographic location of interest to the user includes a zip code of a geographic location nearby a geographic location of interest to at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

61. (Original) The system of claim 49, wherein the first set of information includes information based on at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

62. (Original) The system of claim 61, wherein the second machine is configured to receive the first set of information from the first machine, and wherein at least one of the first machine and the user itself of the first machine determines the present geographic location of the user.

63. (Original) The system of claim 61, wherein the second machine is configured to receive the first set of information from at least one of the first machine and a third machine, and wherein the second machine determines the present geographic location of the user.

64. (Original) The system of claim 63, wherein at least one of the first machine and the third machine includes at least one of a global positioning device and a telecommunication locating device.

65. (Original) The system of claim 49, wherein the first set of information includes information based on a geographic location nearby at least one of a present and a past geographic location of at least one of (i) the user itself, and (ii) at least one of a friend, an acquaintance, a family member, a colleague, a customer and a competitor of the user.

66. (Original) The system of claim 49, wherein the machine-readable medium is configured to store a third set of information, and wherein the second machine is configured to select the third set of information based on at least one of (i) the first set of information, (ii) the geographic location profile of the user, and (iii) the second set of

information, and to send, through the network, the third set of information to a third machine.

67. (Original) The system of claim 66, wherein the third set of information identifies the first mentioned user of the first machine to a second user of the third machine.

68. (Currently Amended) The system of claim 1, wherein the at least one ~~past~~ second geographic location of interest to a user includes locations that the user used to live.

69. (Currently Amended) The system of claim 1, wherein the at least one ~~past~~ second geographic location of interest to a user includes at least one school that the user used to attend.

70. (Currently Amended) The system of claim 17, wherein the at least one ~~past~~ second geographic location of interest to a user includes locations that the user used to live.

71. (Currently Amended) The system of claim 17, wherein the at least one ~~past~~ second geographic location of interest to a user includes at least one school that the user used to attend.

72. (Currently Amended) The system of claim 33, wherein the at least one ~~past~~ second geographic location of interest to a user includes locations that the user used to live.

73. (Currently Amended) The system of claim 33, wherein the at least one ~~past~~ second geographic location of interest to a user includes at least one school that the user used to attend.

74. (Currently Amended) The system of claim 49, wherein the at least one ~~past~~ second geographic location of interest to a user includes locations that the user used to live.

75. (Currently Amended) The system of claim 49, wherein the at least one ~~past~~ second geographic location of interest to a user includes at least one school that the user used to attend.
